

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

Then why do we need the legislation?

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

I don't need or use the digital flag, therefore I don't need the legislation.

It's obviously for a special interest group, not for the general public....then let's NOT.

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

Same response as 3.

I don't need or use the digital flag, therefore I don't need the legislation.

It's obviously for a special interest group, not for the general public....then let's NOT.

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

Same response as 3 & 4.

I don't need or use the digital flag, therefore I don't need the legislation.

It's obviously for a special interest group, not for the general public....then let's NOT.

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

Same response as 3,4 & 5.

I don't need or use the digital flag, therefore I don't need the legislation.

It's obviously for a special interest group, not for the general public....then let's NOT.

Other Comments:

This sounds like the same old story that the recording industry tried (unsuccessfully). SAME as above, if it doesn't benefit the public...it's NOT needed!
